I am a dedicated Machine Learning Engineer with a strong foundation in AI technologies and a passion for leveraging data-driven insights to drive innovation. Currently seeking opportunities to apply my skills in machine learning, data analysis, and software development in a dynamic environment where I can contribute to impactful projects and further my professional growth.

In my recent role at Alignerr, I successfully analyzed AI agent code across over 100 GitHub repositories, leading to a 10% improvement in model accuracy by identifying and addressing recurring failure patterns. Additionally, I co-developed TailorCV, an AI resume-optimization platform that scaled to over 16,000 users globally, demonstrating my ability to manage full-stack development and enhance user experience through innovative solutions.

My experience extends to hands-on roles in engineering and data analytics, where I have gained insights into production processes and supply chain management. I have a proven track record of utilizing tools such as Python, SQL, and various machine learning frameworks to deliver actionable insights and optimize performance.

I am eager to bring my technical expertise and collaborative spirit to a forward-thinking organization. I look forward to discussing how my background, skills, and enthusiasms align with your needs and contribute to your team's success.

Sincerely,

Shubham Sarkar
