Dear Hiring Manager,

I'm a computer science undergraduate focused on building practical software and using data and AI to solve real-world problems. I'm looking for opportunities to contribute my technical skills, learn from collaborative teams, and deliver thoughtful, reliable solutions.

I built TailorCV, a full-stack AI resume platform that has reached more than 500 users across India. I developed its ATS scoring and resume-tailoring engine, launched a Chrome extension supporting 15 job boards, and added automated end-to-end testing with Playwright. In a separate Python engineering assignment, I evaluated AI-generated fixes across 50+ GitHub repositories and contributed root-cause analysis associated with a 15% improvement in model accuracy.

My experience also includes analyzing 3,900 transaction records with Python, SQL, and Power BI to uncover customer and revenue insights, as well as hands-on exposure to manufacturing, quality control, and supply chain operations at Berger Paints. I bring skills in Python, JavaScript, FastAPI, SQL, and PostgreSQL, along with a practical, analytical approach to problem-solving.

I would welcome the opportunity to discuss how my experience and initiative could contribute to your team. I look forward to speaking with you.

Sincerely,

Trisha Debnath
