Dear Hiring Manager,

I'm a computer science undergraduate at Jadavpur University focused on building practical software and applying data and AI to real-world problems. I'm seeking opportunities to contribute my skills in Python development, product engineering, and data analysis while continuing to grow as a technology professional.

I built TailorCV, a full-stack resume-optimization platform that has served more than 500 users. I developed its ATS scoring and tailoring engine, integrated payment systems, and launched a Chrome extension that reduced resume-tailoring time from about 10 minutes to under a minute across 15 job boards. I also evaluated AI-generated Python fixes across 50+ repositories, using a 10-metric rubric and root-cause analysis that contributed to a 15% improvement in model accuracy.

My experience also includes analyzing 3,900 transaction records with Python and SQL, creating a Power BI dashboard, and documenting manufacturing and supply-chain processes during my engineering traineeship at Berger Paints. I bring hands-on experience with Python, FastAPI, PostgreSQL, JavaScript, and data analysis, along with a collaborative mindset strengthened by organizing university workshops and events.

I would welcome the opportunity to discuss how my technical skills, initiative, and practical project experience could contribute to your team. I look forward to connecting.

Sincerely,

Trisha Debnath
